Environmental Guideline on asphalt plant set up temporarily for the purpose of a project by a public department

Department of Environment

This environmental guideline provides guidance to ensure that all environmental issues are duly taken into consideration by the prospective developers.
1.0 Background

An asphalt plant is a plant used for the manufacture of asphalt using bitumen and aggregates. The rationale behind setting a temporary asphalt plant for the purpose of a project by a public department is to reduce on cost and transportation time.

The mechanical equipment used includes aggregate conveyors/ feeders, mixing drum, electric burner and bitumen tanks.

The operation of an asphalt plant is associated with several environmental issues, namely:

- Site selection
- Dust and air emissions
- Odour
- Noise
- Wastewater / effluents and storm water run-off
- Solid wastes
- Waste Oil, hydrocarbon and oil spills from vehicles and equipment
- Energy and water consumption

2.0 Objectives of the guideline

This guideline is meant to ensure that prospective developers:

- adopt appropriate mitigating measures to safeguard the environment.
- comply with provisions of relevant laws/ regulations/standards.
- adopt eco-friendly practices to optimize use of resources.

3.0 Applicable Legislation

An asphalt plant set up temporarily for the purposes of a project by a public department does not warrant a Preliminary Environmental Report (PER) Approval or an Environmental Impact Assessment (EIA) Licence.

Note:-

According to Part B of the Fifth Schedule of the Environment Protection Act (EPA), item 1 “Asphalt plant other than an asphalt plant set up temporarily for the purposes of a project by a public department” warrants an Environmental Impact Assessment (EIA) Licence.

4.0 Location and Siting

(i) In accordance with the Planning Policy Guidance 2004 of the Ministry of Housing and Lands, the site for asphalt plants should normally:

- satisfy a distance of up to 1 km from the settlement boundaries and sensitive land uses
- be at least 50 m from the coastline
- be at least 35 m from the river
- be up to 1 km from a lake.

(ii) While locating the asphalt plant within the project site, consideration should be given to its lay-out, with a view to avoiding disturbance to the surrounding environment.

(iii) The site should not be located within any Environmentally Sensitive Area (ESA) and its prescribed buffer zone as per ESA Study 2009 such as wetland, steep slope and in areas that are likely to be affected by hazards such as inland flooding, landslide and storm surges, amongst others.
(iv) On-site waste disposal facility such as septic tanks and absorption pits/leaching fields shall be located not less than 30 m from any water course as per Rivers and Canals Act 1863.

(v) Existing natural drains and watercourses on or in the vicinity of the site shall not be tampered with.

5.0 Mitigation of Environmental Impacts

5.1 Dust and air emissions

The main sources of dust nuisances are:
- during unloading of aggregates from lorries
- during loading of aggregates in hopper bins
- from heaped stockpiled materials
- from operation of diesel operated machines
- from dust to and fro of vehicles within the premises

Air emissions are from operation of the equipment, hot molten asphalt fumes and exhaust of vehicles.

Necessary abatement measures should be taken such that all emissions from the plant comply with the Environment Protection (Standards for Air) Regulations 1998.

Mitigating measures include:
- Well-designed sprinklers to be located at all points to contain dust pollution, using preferably collected rain water
- Use of water to wet all processes and sources from which dust emanates
- The premises and access roads should be kept clean and free of dust at all times

*Monitoring of dust emissions, notably particulate matter (PM$_{10}$), should be carried out on a regular basis.*

5.2 Odour

Odour is a key concern as regard to bitumen/asphalt fumes. Abatement measures must be taken to avoid such nuisances.

Mitigating measures include:
- Odour controlling equipment such as scrubbers and filters to be incorporated.

5.3 Noise abatement

Noise from the asphalt plant arises from:
- Use of mechanical equipment and electric motors, including conveyor belt motors, dryer and mixer drum.
- Movement of loaders within the site
- Lorry traffic within site

As such, necessary precautions shall be taken to ensure noise emitted from the plant is within permissible limits as per the Environmental Standards for Noise Regulations under the EPA which stipulates:

<table>
<thead>
<tr>
<th>Industrial Noise</th>
<th>Noise exposure limits</th>
<th>Neighborhood Noise</th>
<th>Noise exposure limits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Time</td>
<td>07.00-18.00 hrs.</td>
<td>Time</td>
<td>07.00-18.00 hrs.</td>
</tr>
<tr>
<td>07.00-21.00 hrs.</td>
<td>60 dB (A) $L_{eq}$</td>
<td>18.00-21.00 hrs.</td>
<td>55 dB (A) $L_{eq}$</td>
</tr>
<tr>
<td>21.00-07.00 hrs.</td>
<td>55 dB (A) $L_{eq}$</td>
<td>07.00-18.00 hrs.</td>
<td>60 dB (A) $L_{eq}$</td>
</tr>
<tr>
<td></td>
<td>21.00-07.00 hrs.</td>
<td></td>
<td>21.00-07.00 hrs.</td>
</tr>
</tbody>
</table>

A tonal character adjustment of $+5$ dB (A) should be applied to the measured value where the noise has a definite continuous note such as a whine or hiss.
Mitigating measures include:

- Noise generating equipment such as generators, compressors should be provided with appropriate noise attenuating materials/ structures.
- Proper and regular maintenance of equipment should be carried out.
- Appropriate noise abatement measures to prevent noise nuisance to the surrounding environment.
- Provision of protective equipment and regular medical screening for staff to the satisfaction of Ministry of Labour, Industrial Relations, Employment and Training.

*Noise monitoring using calibrated noise meter should be carried out on a regular basis.*

### 5.4 Wastewater management

Wastewater generated on-site arises from both domestic and industrial sources.

- Domestic wastewater is generated by staff employed at the plant
- Industrial wastewater comprises effluents from washing, sprinkling of water for dust abatement and runoff.

Mitigating measures include:

- Provision of appropriate wastewater treatment and disposal facility to the satisfaction of the Wastewater Management Authority.
- Installation of grease traps or oil water separators for removal of floatable solids from wash water.

*Note:* Maintenance of the grease trap or oil water separator is to be carried out by the owner / promoter.

- Wash water should be channeled into a sedimentation tank. The effluent from the sedimentation tank should be treated and reused for dust abatement and the settled solids be reused.

### 5.5 Solid wastes

Solid wastes are mainly domestic wastes generated by the staff.

Mitigating measures include:

- Domestic solid wastes to be regularly collected in bins or waste handling receptacles and disposed of to the satisfaction of the Local Authority.
- No waste of any type to be disposed of in any watercourse including drains, canals and the surrounding environment.

### 5.6 Waste Oil, hydrocarbon and oil spills from vehicles and equipment

Where fuelling is proposed on site, a dedicated platform/ bay must be provided. Necessary measures need to be taken to prevent any hydrocarbon and oil spill at the fuelling bay or from storage tanks.

Where servicing is proposed on site, a dedicated workshop must be provided for such activity.

Mitigating measures include:

- Waste oil shall be collected and disposed of as per the provisions of the Environment Protection (Collection, Storage, Treatment, Use and Disposal of Waste Oil) Regulations 2006.
- Proper disposal of waste oil at approved oil recycling companies
- Hazardous wastes shall be collected and disposed as per the provisions of the Environment Protection (Standards for hazardous wastes) Regulations 2001.
- Necessary bunded wall to be provided around any fuel storage tank
- Provision of a separate collector drain with an oil interceptor to properly manage wastewater from washing of any workshop area
Contingency plans should be developed for any accidental spillage of petroleum products or any other unforeseen circumstances.

5.7 Decommissioning of the asphalt plant

Decommissioning of the asphalt plant entails dismantling of equipment and machinery and reinstatement of the site.

Mitigating measures include:-

- All necessary measures should be taken to avoid disturbance to the surrounding environment.

5.8 Other mitigating measures

- Necessary precautions should be taken to avoid disturbance to the neighbourhood by way of dust, mud, traffic or other nuisances during construction and operation phase.
- Precautionary measures should be taken for safe haulage of the materials such that there is no spillover during transportation on the road networks.
- Provision to be made for adequate parking, loading and unloading facilities.
- Safe storage of materials on site and stored materials not unduly visible or intrusive in the street scene.
- Provision for a proper drainage scheme for evacuation of stormwater to avoid any risks of flooding/water-logging of site and adjoining areas to the satisfaction of the Local Authority.
- The premises should be kept clean at all times with good housekeeping.
- Installation of bait stations / traps to control pests and rodents.

5.9 Eco-friendly Measures and Sustainability

Best environment friendly practices and initiatives need to be adopted such as water harvesting for washing of premises and irrigation; energy efficient appliances and energy-saving devices (LED lamps); sensor lights.

Note:

a. Relevant organizations need be consulted with regard to traffic implications, fire, amongst others prior to embarking on the project to ensure compliance with their respective laws/regulations/standards.

b. Non-compliance with environmental laws namely standards for air and noise is an offence under the EPA.

Copies of this guideline are available at the Department of Environment and on the website of the Ministry at http://environment.govmu.org; the government’s portal at http://www.govmu.org, including the websites of Local Authorities.
