ENVIRONMENTAL IMPACT ASSESSMENT

PROPOSED CELLULAR BASE STATION

AT REDUIT TRIANGLE

SUBMITTED BY

PREPARED BY

JANUARY 2015
Abstract

EMTEL Ltd. became the First Mobile Telephony Operator in the whole Southern Hemisphere in 1989. This major step in Mauritian Telecommunications History was the fruit of the collaboration of two pioneering groups – The Currimjee Jeewanjee Group, one of the foremost groups in Mauritius, and Millicom International Cellular (MIC) S.A., based in Luxembourg. During these 24 years, Emtel has managed to sustain this innovation drive and still today, the Emtel brand itself is the synonym of technology, innovation and high quality.

Today, Emtel is not only providing Mobile Services but is also offering Fixed Access Services to its clients. In order to allow connection to its network, Emtel must put up Base Stations which relay the signal to and from customer devices in the vicinity of that Base Station. Without base stations, there can be no telecommunication network.

This project termed as “E-Site Project”, consists of the erection of an eco-friendly cellular Base Station of 27m high at the Réduit triangle. The electricity of the E-Site proposed by Emtel Ltd., unlike the traditional cellular base station with conventional power from the CEB grid, will be generated from a combination of solar and wind turbine systems which will be in line with the concept of “Maurice Ile Durable”. Emtel Ltd. has not been indifferent to the current environmental problems and has shown its dedication to contribute in finding solutions to these challenges by proposing the First Base Station which will generate its own power requirements in Mauritius. The E-site will put more emphasis on the necessity to saving energy from traditional sources (fossil fuel) while harnessing its own Green renewable energies.

Abstract ........................................................................................................................................... 1

LIST OF FIGURES .......................................................................................................................... 6

LIST OF TABLES .............................................................................................................................. 7

LIST OF ANNEXURES .................................................................................................................... 8

**CHAPTER 1:**

1 INTRODUCTION.......................................................................................................................... 10

1.1 Brief Description about the Company .................................................................................. 10

1.2 Project Team ........................................................................................................................... 11

1.3 Project Description ................................................................................................................ 12

1.3.1 Power Generation .............................................................................................................. 13

1.3.2 Equipment Shelter .......................................................................................................... 14

1.3.3 Antenna and Transceiver ............................................................................................... 14

1.3.4 Erection of Tower ........................................................................................................... 15

1.4 Project Justification ............................................................................................................... 15

1.5 Project Alternatives ............................................................................................................. 17

1.6 Schedule of Implementation ............................................................................................... 18

**CHAPTER 2:**

2 SITE DESCRIPTION AND CHARACTERISTICS ...................................................................... 19

2.1 Site Location .......................................................................................................................... 19

2.2 Site Access ............................................................................................................................. 20
2.3 Site Boundaries ................................................................. 21
2.4 Site Topography ............................................................... 22
2.5 Surrounding Environment ................................................. 22
2.6 Hydrological Characteristics ............................................. 22
2.7 Rainfall ........................................................................... 22
2.8 Temperature ..................................................................... 23
2.9 Wind Regime .................................................................... 24
2.10 Site Geology ................................................................. 25

CHAPTER 3:

3 POLICY, LEGAL AND ADMINISTRATIVE FRAMEWORK .......... 27
3.1 Promoter ........................................................................ 27
3.2 Land Ownership ............................................................. 27
3.3 Legal Requirements ....................................................... 27
3.4 Zoning ........................................................................... 28
3.5 Licence Application .......................................................... 28

CHAPTER 4

4 TECHNICAL CHARACTERISTICS ........................................... 29
4.1 Power Requirements ....................................................... 29
4.2 Control System .............................................................. 29
4.3 Wind Turbine ................................................................... 31
4.4 Solar Panels ..................................................................... 32
4.5 Battery System ............................................................... 33
4.6 Base Station Components .................................................. 34
CHAPTER 5

5 PREDICTED ENVIRONMENTAL IMPACTS & MITIGATING MEASURES ........ 37

5.1 Overview ............................................................................................................ 37

5.2 Construction Phase ............................................................................................ 38

5.2.1 Possible Environmental Impacts during Construction ................................... 38

5.2.2 Mitigating Measures during Construction ...................................................... 39

5.2.2.1 Effect on Ecology ...................................................................................... 39

5.2.2.2 Risk of Soil Erosion ............................................................................... 39

5.2.2.3 Noise and Vibration ................................................................................ 39

5.2.2.4 Traffic Implications ................................................................................ 40

5.2.2.5 Dust Emission ........................................................................................ 40

5.2.2.6 Public Nuisance ..................................................................................... 40

5.2.2.7 Waste Generation ................................................................................... 40

5.3 Operation Phase .................................................................................................. 41

5.3.1 Noise Emission .............................................................................................. 42

5.3.1.1 Sources of Noises .................................................................................. 42

5.3.1.2 Impact of Noise ....................................................................................... 42

5.3.2 Impact on Land Use ....................................................................................... 44

5.3.3 Visual Impacts ................................................................................................. 44

5.3.4 Impacts on Human Health ............................................................................. 46

5.3.4.1 Health Problems ....................................................................................... 46

5.3.4.2 Measures and Facts ................................................................................ 48
EIA Report

5.3.4.3 Mitigating Measures .................................................................................. 52

5.3.4.4 Public Consultation Process for the proposed E-Site Cellular Base Station at Réduit Triangle, Réduit .......................................................... 54

5.3.5 Impacts on other Operators ........................................................................... 58

5.3.6 Traffic Implications ....................................................................................... 59

CHAPTER 6

6 SOCIO ECONOMIC IMPACTS ........................................................................... 60

6.1 Sustainable Development ................................................................................. 60

6.2 Better Telecommunication network ................................................................. 61

CHAPTER 7

7 RISK ASSESSMENT ............................................................................................. 63

7.1 Fire Hazards .................................................................................................... 63

7.1.1 Risk of Fire Outbreak ................................................................................. 63

7.2 Cyclonic Conditions ....................................................................................... 63

7.2.1 Risk of Cyclones ......................................................................................... 63

7.2.2 Precautions and Contingency Plan ............................................................ 64

CHAPTER 8

8 ENVIRONMENTAL MONITORING PLAN ..................................................... 65
