# Circular Economy with Focus on Plastic Wastes <br> Riad Sultan 

Plastic free Mauritius: Defining the Roadmap
Consultative Workshop \& Expo-Vente on Plastic at
Caudan Art Centre

## Circular Economy

- 9R Framework: a set of 9 strategies to be considered for a CE approach, in order of priority:
- Refuse, Rethink, Reduce, Reuse, Repair, Refurbish, Remanufacture, Repurpose, Recycle, and Recover.
- Waste hierarchy: A priority operations order in waste management: prevention, preparing for reuse, recycling, other recovery (including energy recovery), and disposal.
- Upcycle: Transforming waste materials, useless or unwanted products into new materials or products with high perceived value.
- Resource Efficiency: The use of limited resources in a sustainable manner and minimizing environmental impacts, delivering greater value with less input.
- Closed Loop: The combination of reverse and forward logistics with focus on reducing use of raw material and generation of waste by treating effluents and returning them to reuse and/or increasing the durability of products.
- Reverse Logistics: Return used or unused products (parts) from consumers to producers to generate value by reusing or proper disposing.
- Industrial Symbiosis: Cooperation among industries, where one's wastes become other inputs.
- Cradle to Cradle: Create products that allow the safe and potentially infinite (re) use of materials in cycles.
- Clean and Renewable Energies: The use of clean and renewable energy sources instead of fossil and polluting sources.
- End of Life Strategies: Sustainable strategic actions to be performed when a product of component reaches its end of life.

## Household wastes under Growth Scenarios

## Composition of household wastes

## Forecast of wastes under Growth Scenarios

## Quantity of PET waste projection 2021-2030 (tonnes)

- Only around 2000-3000tonnes of PET are currently recycle in Mauritius
- It must be noted that PET are converted into secondary raw materials, not final products.
- If all the PET are converted into secondary intermediate output, the total output that can be generated will range from 368 m to 480 m annually, ( $2 \%$ to $6 \%$ growth scenarios), generating a direct formal employment of around 250 to 300.
- Indirect (formal and Informal) employment is higher

## Direct gross output of recycling PET projection 2021-2030

## Indirect gross output of recycling PET projection 2021-2030

The change in output of other local industries due to the purchases of intermediate inputs produce a unit of direct gross output

## Recycling of PET

|  | Quantity (tonnes) | Total output (Rs million) | \% Increase GDP | Investment (Rs Million) |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 2025 | 2030 | 2025 | 2030 | Average 2021-2030 | 2025 <br> capacity | 2030 <br> capacity |
| GDP growth 2\% | 13,567 | 14,979 | 368 | 413 |  | 99.4 | 111.5 |
| GDP growth 4\% | 15,243 | 18,546 | 422 | 527 |  | $0.04 \%$ | 113.8 |
| GDP growth $6 \%$ | 17,089 | 22,869 | 480 | 664 |  | 129.6 |  |

## Recycling HDPE

| :---: | :---: | :---: | :---: | :---: | :---: |

## Employment impacts

|  | Direct employment |  | Indirect employment |  | Total employment |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 2025 | 2030 | 2025 | 2030 | 2025 | 2030 |
| GDP growth 2\% | 188 | 211 | 44 | 50 | 233 | 261 |
| GDP growth 4\% | 216 | 269 | 51 | 64 | 267 | 333 |
| GDP growth 6\% | 246 | 340 | 58 | 80 | 304 | 420 |

Direct employment: The change in employment directly related to the direct gross output.

Indirect employment: The change in employment in other local industries due to

|  | Direct employment |  | Indirect employment |  | Total employment |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 2025 | 2030 | 2025 | 2030 | 2025 | 2030 |
| GDP growth 2\% | 272 | 303 | 64 | 72 | 337 | 374 |
| GDP growth 4\% | 306 | 378 | 72 | 89 | 378 | 468 |
| GDP growth 6\% | 342 | 419 | 81 | 99 | 423 | 517 | the purchases of intermediate inputs to produce a unit of direct gross output.

## Elements for CE-plastics

- The elements that could provide the foundations of a successful recycling system-a circular economy for plastics-are multifold:
- The first is to conduct research on product design and market conditions to reuse the recovered plastics by recycling them, turning them into new products that will create value.
- This will require a strong industry-university collaboration.
- The second is to design or redesign plastic products to be recyclable and to be used as inputs, with the necessary certification.
- The third is putting in place effective infrastructure and logistic systems to recover end-of-life plastics.
- And the fourth is a cultural shift towards segregation and the use of recycling plastic by consumers and producers.
